Artificial Intelligence

Artificial Intelligence

AI -- refers to the simulation of human intelligence in machines that are programmed to think like humans and mimic their actions.

Machine Learning

What is Machine Learning?

- **Machine Learning** is a type of Artificial Intelligence(AI) that provides computers with the ability to learn without being explicitly programmed. Machine Learning focuses on the development of computer programs that can change when exposed to new data.

Why Python for Machine Learning

- Python is very easy to use & Open Source
- It supports many libraries & frameworks
  - Numpy, Pandas, Scikit Learn
- Community & Corporate Support

Top 5 IDE for ML

1. Jupyter Notebook
2. Spyder
3. Pycharm
4. Atom
5. Vscode

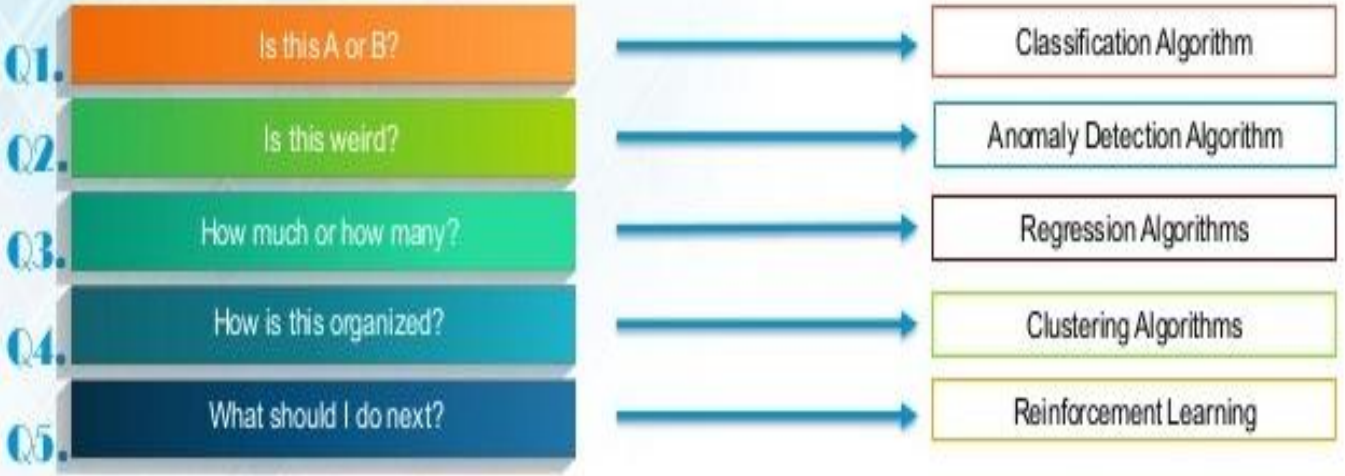
We take a top down approach to answer the same:

These are the 5 questions which can be answered in data science.



These algorithms are fitted into three types of categories, which are the following:

Thank You!!
